Sample Questions and Model Answers

Below are some common questions from class 8 science along with model answers, demonstrating how to answer effectively.

Q1. What are the main functions of the human digestive system?

The human digestive system is responsible for breaking down food, absorbing nutrients, and eliminating waste. The main functions include ingestion (taking food into the mouth), digestion (breakdown of food into simpler molecules), absorption (uptake of nutrients into blood or lymph), and

egestion (removal of indigestible substances as waste). The process involves organs such as the mouth, esophagus, stomach, small intestine, large intestine, liver, and pancreas, each playing a vital role in ensuring proper digestion and nutrient absorption.

Q2. Explain the process of photosynthesis.

Photosynthesis is the process by which green plants prepare their food using sunlight, carbon dioxide, and water. It occurs in the chloroplasts of plant cells, primarily in the leaves. The process involves the conversion of light energy into chemical energy, resulting in the formation of glucose and oxygen. The overall simplified reaction is:
6CO? + 6H?O + sunlight ? C?H??O? + 6O?
This process is essential for maintaining atmospheric oxygen levels and providing energy for all living organisms.
