Fundamental Java Concepts in MSBTE Notes

- Introduction to Java

Java, developed by Sun Microsystems in 1995, is a high-level, object-oriented programming language. Its key features include platform independence (write once, run anywhere), automatic memory management (garbage collection), and robustness.

Features of Java:

- Simple and familiar syntax derived from C/C++
- Portable: bytecode runs on any JVM
- Secure: built-in security features
- Multithreaded: supports concurrent processing
- Dynamic: supports dynamic memory allocation

- Data Types and Variables

Java provides various data types to handle different kinds of data:

- Primitive types: byte, short, int, long, float, double, char, boolean
- Reference types: objects, arrays, classes

Variable declaration example:

```java

int age = 20;

char grade = 'A';

boolean isPassed = true;

```

- Operators and Expressions

Java operators include arithmetic (+, -, , /), relational (==, !=, >,
Example:

```java

int sum = a + b;

if (a > b && b != 0) {

// Code block

}

```

Control Statements and Looping Constructs

Control structures control the flow of execution.

- Conditional Statements

- if-else
- switch-case

Example:

```java

if (marks >= 40) {

System.out.println("Pass");

} else {

System.out.println("Fail");

}

```

- Looping Statements

- for loop
- while loop
- do-while loop

Sample for loop:

```java

for (int i = 0; i
System.out.println(i);

}

```

Arrays and Strings

- Arrays

Arrays store multiple data elements of the same type.

Example:

```java

int[] numbers = {1, 2, 3, 4, 5};

```

- Strings

Strings are objects in Java, used to handle text.

Example:

```java
```

String name = "MSBTE";

System.out.println(name.length());

```

Object-Oriented Programming (OOP) in Java

OOP is at the core of Java programming, and understanding its principles is vital for MSBTE students.

- Classes and Objects

- Class: blueprint for objects
- Object: instance of a class

Example:

```java

class Student {

String name;

int rollNumber;

void displayDetails() {

System.out.println("Name: " + name);

System.out.println("Roll Number: " + rollNumber);

}

}

public class Main {

public static void main(String[] args) {

```
Student s1 = new Student();

s1.name = "Rahul";

s1.rollNumber = 101;

s1.displayDetails();

}

}
```

- Inheritance

Inheritance allows a class to acquire properties from another class.

```java
class Animal {

void eat() {

System.out.println("This animal eats food");

}

}

class Dog extends Animal {

void bark() {

System.out.println("Dog barks");

}

}
```

```

- Polymorphism

Ability of an object to take many forms, typically through method overriding and overloading.

- Encapsulation and Abstraction

- Encapsulation: wrapping data with methods
- Abstraction: hiding complex details

Exception Handling in Java

To write robust programs, understanding exceptions is important.

Try-Catch Example:

```java
try {
int result = 10 / 0;
} catch (ArithmeticException e) {
System.out.println("Cannot divide by zero");
}
```

File Handling

Java provides classes for file operations.

Reading a file:

```java

```
import java.io.File;

import java.io.FileReader;

import java.io.BufferedReader;

public class ReadFile {

public static void main(String[] args) throws Exception {

File file = new File("example.txt");

BufferedReader br = new BufferedReader(new FileReader(file));

String line;

while ((line = br.readLine()) != null) {

System.out.println(line);

}

br.close();

}

}
```

Multithreading Basics

Multithreading allows concurrent execution of threads.

Simple Thread Example:

```java
class MyThread extends Thread {

public void run() {
```

```
System.out.println("Thread is running");

}

}

public class Main {

public static void main(String[] args) {

MyThread t1 = new MyThread();

t1.start();

}

}
```

Java Applets and GUI (If covered in syllabus)

While less emphasized today, some MSBTE courses include basic applet and GUI programming using Swing.
